

How to Fit HAR-VEST on a Dog

VEST

CHEST STRAP w/ O-RING

GIRTH STRAP

ELASTIC BELLY STRAP

Each Har-Vest comes with a VEST & 3 STRAP SET.

BELLY STRAP

Determine most appropriate snap option for your dog. Function of strap is to hold the back of Har-Vest from flipping up. Can be worn snug or loose.

GIRTH STRAP

Clip girth strap to side O-ring on one side of vest and bring under dog's torso behind front elbows & clip to other side O-ring. Side O-rings should rest on shoulder of dog (*see picture*).

CHEST STRAP/O-RING

Snug and attached to side o-rings across front of dog's chest. Think of it as a bra -- snug fitting to provide support. Leash attaches to front O-ring.

WE RECOMMEND YOU ATTACH LEASH TO O-RING **AND** COLLAR. If there is too much tension, (i.e., your dog lunges hard), the plastic clips are designed to break. If you have leash attached to both collar and o-ring, even if clip breaks, your dog is still secured to leash.
